

Duralite II

North is proud to introduce the Duralite II.

Until now fall arrest blocks were relatively heavy and serviceable, or lightweight and disposable. North's Duralite II combines the best of both. Its plastic housing and web lanyard result in a low weight (2.525 kg.). The high tensile, non-corrosive metal parts result in a fully serviceable unit.

Applications:

North's Duralite II has a built-in shock absorber. Therefore bulky external shock absorbing pouches will not get in the way. Its 6 metres long dyneema webbing is cut resistant.

The field of application is wide and its light weight allows for ease of use on horizontal life lines.

Self retracting life lines or fall arrest blocks are the most worry-free fall arrest solution. Their lifeline is always under tension and therefore a free fall resulting in a high peak load on the body, and possible injury, can not happen.
