

### Load Arrest Blocks    HSL1 G-GUARD 300

7m, 10m, 12m, 15m, 18m, 20m, 24m

<b>Description</b>	G-Guard 300kg is a retractable tensioned safety line for protection of machinery, high value and sensitive loads
<b>Physical Properties</b>	Cable lengths: 7,10,12, 15, 18, 20, 24m. Maximum working load: 300kg. Stopping Distance (approx.): min: 0.3m; max: 1.0m. Fall protection brake can be activated by quickly extracting the safety line from within the arrester housing. This happens when a fall occurs. Brake includes a shock-absorbing element to minimise forces encountered when stopping a fall.
<b>Uses</b>	The G-Guard range of load fall arresters are suitable for protecting both static and moving loads in a wide variety of applications. Where directional movement, usually gravitational, above a speed must be protected against, the G-Guard range of load arresters offer an 'off the shelf' solution for stopping moving loads.
<b>Precautions</b>	Safe working load 300kg
<b>Standard</b>	CE 0353. 2006/42/EC
